Wardrobe Stylist
UI Style Guide

Direction: **The Lookbook**. The app should feel like a printed fashion lookbook or a tailor's notebook, not a SaaS dashboard. Your clothes are the color; the interface is paper and ink.

DRAFT
v0.1 · 26 Oct 2026

01

Principles

Four ideas every screen follows. When a default (Tailwind, a component library, an AI suggestion) disagrees with these, these win.

Your clothes are the color.

The interface is near-monochrome. Garment photos and renders are the only saturated things on screen.

Editorial, not decorative.

One serif moment per screen. Hierarchy comes from size, weight and space — not boxes, shadows and gradients.

Tailoring is the visual language.

Garment tags, care labels and lookbook numbering ("Look 01", "Piece 2/4"). Only a wardrobe app can use it — that's why it's ours.

Show the thinking honestly.

The stylist's checks and revisions appear as short "fitting notes", never as a glowing AI badge.

Logo-swap test: if you replaced our logo with a fintech logo and the screen still made sense, it's too generic.

02

Color

Warm paper, warm ink, one oxblood accent used at most twice per screen. Status colors are earthy and always paired with a word.

Light

paper
#F4F1EA
Page background

paper-raised
#FBF9F4
Sheets, prompts

studio
#E9E5DC
Behind garments

rule
#DAD4C8
Hairlines, borders

ink-faint
#8F887D
Meta only

ink-muted
#5E5850
Secondary text

ink
#1C1A17
Primary text

paper-raised
#1E1C19

ink
#ECE7DD

accent
#D0694F

ok
#8DB283

Proportion on a typical screen

Paper ~60% · studio ~20% · ink ~12% · rules ~5% · accent ≤2% · status ≤1%. Garment photos supply the rest of the color.

03

Typography

Instrument Serif for one editorial moment per screen; Instrument Sans for everything else. Both free on Google Fonts. Not allowed: Inter, Roboto, Geist, Plus Jakarta, monospace outside code.

DISPLAY	Rain-ready *client day* Instrument Serif 400 · italic for emphasis · −0.02em · line-height 1.1
SUBHEAD	**Packing for Chicago** Instrument Sans 600
BODY	Rain starts around five, so the suede loafers stay home. The leather boots handle puddles and still read smart enough for the client review. Instrument Sans 400 · 16px min · line-height 1.5 · ≤65ch
TAG LABEL	OUTERWEAR · PIECE 2/4 · CLEAN Instrument Sans 500 · uppercase · +0.08em · care-label style
NUMBERS	14° → 9° · 80% rain · 5 days · 11 pieces tabular-nums so columns align

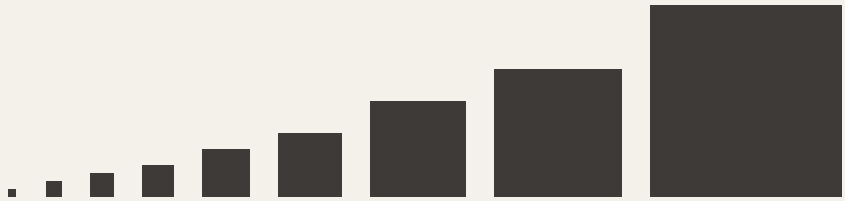

Scale — ratio 1.25, base 16

49	Look 01
39	Tuesday
31	Chicago, Thu–Sun
25	**Your closet**
20	**Fitting notes**
16	Navy merino crewneck
13	Worn 3 times since wash
12	KNITWEAR

04

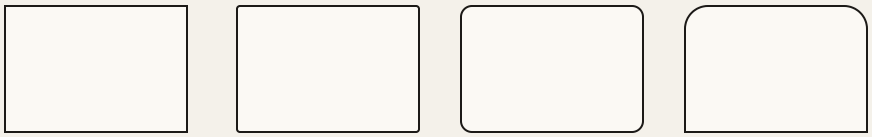

Space, shape, elevation

Spacing scale (4px base)

Space between groups is at least two steps larger than space within a group. 20px page gutter on phones.

Radius by role

0 · photos, sections

2 · tags, chips

6 · buttons, inputs

12 · bottom sheets

Elevation

Default: on paper, hairlines

Floating: sheets only

A container gets one of border, tint or shadow — never all three. No card inside a card.

05

Components

Buttons — one primary per screen

I wore this | Another look | Edit pieces | Packing…

Labels name the action. No “Get started”, no chevrons, no pill-shaped gradient buttons.

Tags & chips

GYM | DINNER OUT | DATE | OUTDOORS | NOTHING ELSE

Inputs

Home city

Brooklyn, NY

Trip destination

Chicago

Render mode — text segmented control

Try-on | Flat lay | Pieces

Weather & events — one line, not stat cards

14° → 9° · Rain from 5pm
10:00 Client review · 19:00 Drinks *(added)*

Garment tiles

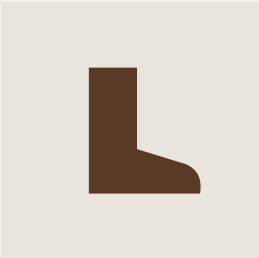

OUTERWEAR
Navy wool overcoat

KNITWEAR
Oat merino crewneck

DENIM
Selvedge jeans
WORN 4/5

FOOTWEAR
Brown leather boots

TOPS
Rust cotton tee
LAUNDRY

Fitting notes — the agent’s checks

- ✓ **Dress code** — client review → smart
- ✓ **Weather** — 9° by evening, overcoat added
- ↺ **Swapped** ~~suede loafers~~ → leather boots. 80% rain at 5pm.
- ✓ **Clean** — every piece available

States

Your closet is empty.

Film it once — it takes about a minute.

Scan closet

Couldn’t render the try-on. Showing the pieces instead. Try again

Checking Thursday’s forecast in Chicago…

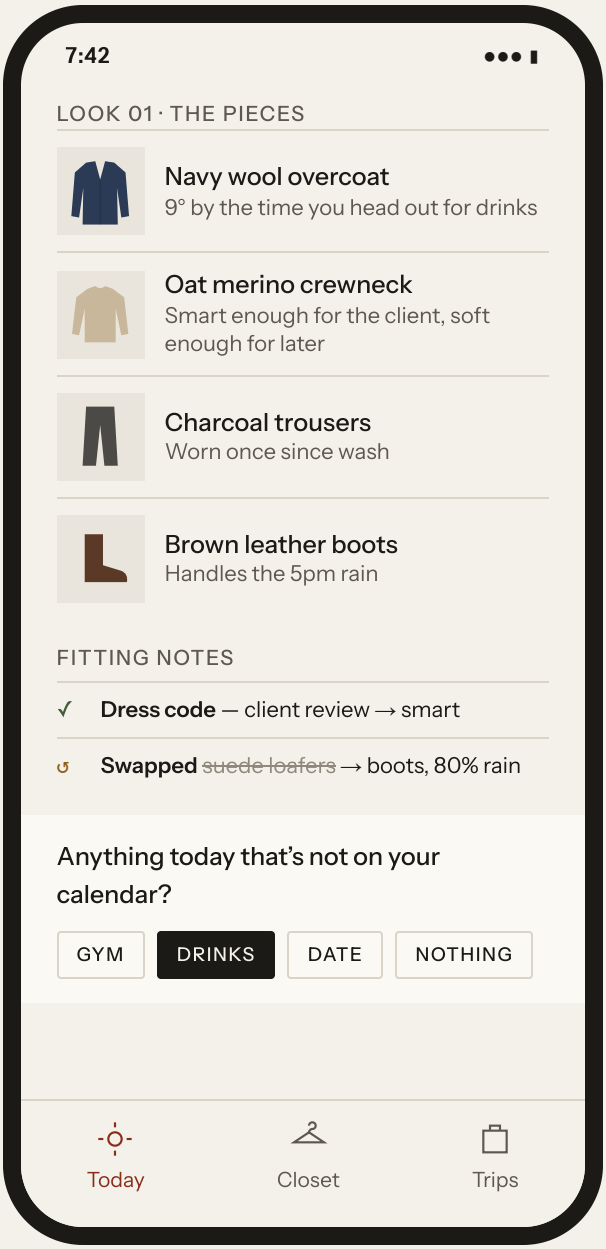

06

Screens

Mockups at phone size. Garment art is placeholder — real screens show SAM cutouts and Muse Image renders.

Today. One serif moment, the look fills the width, one primary action.

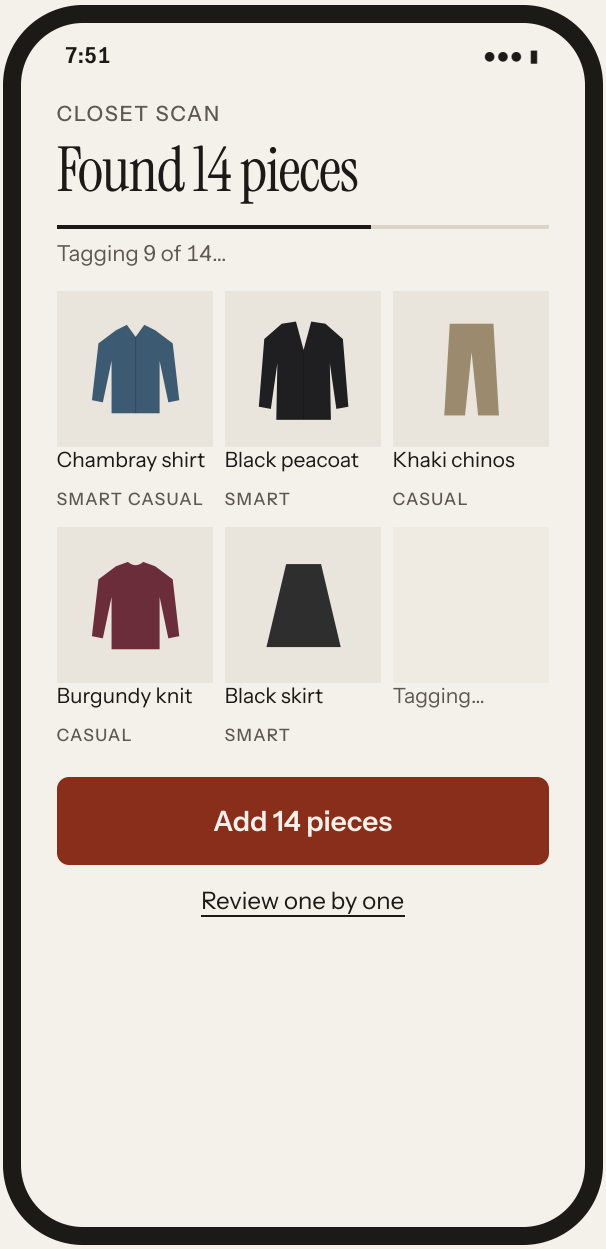

Today, scrolled. Each piece explains itself; fitting notes show the self-correction; the follow-up question.

Screens (cont.)

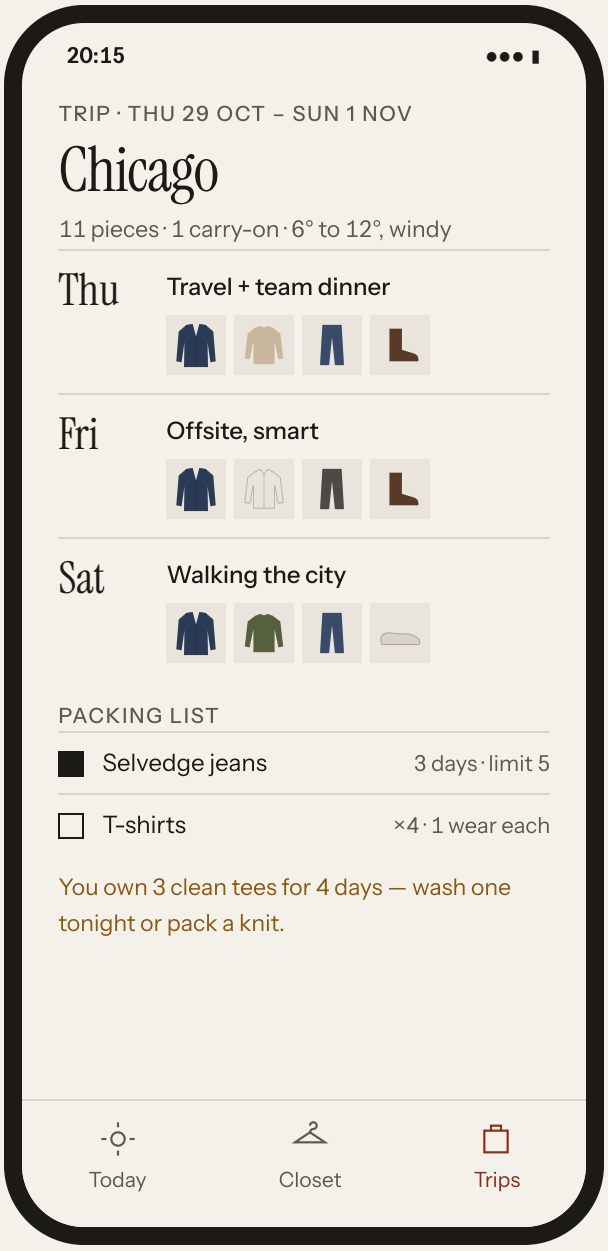

Closet. Cutouts on studio gray, no cards, status as words not dots.

Scan review. Pieces settle in as they're found; you confirm before anything is used.

Screens (cont.)

Trip. Day-by-day looks, a packing list that respects rewear limits, and an honest warning.

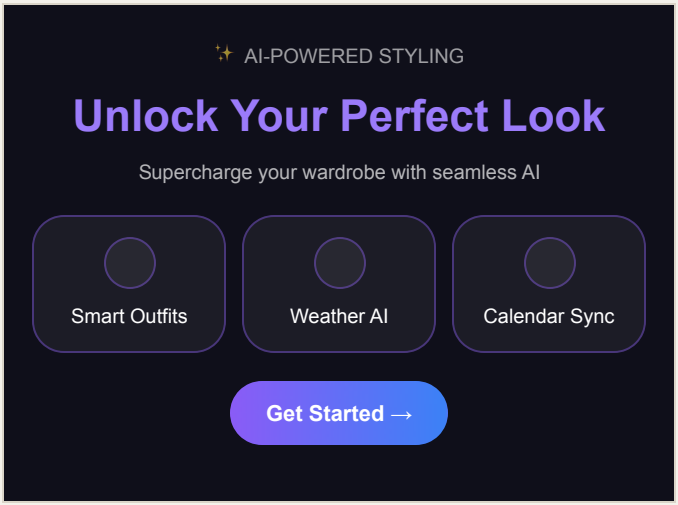

Dark mode. Warm off-black, lighter accent, no shadows.

07

What we're avoiding

The same moment — "here's your outfit" — done the default AI way and our way.

Don't. Gradient text, purple glow, Inter, three equal icon cards, sparkles, "unlock / supercharge / seamless", pill CTA with chevron. Swap the logo and it's any app.

Do. Specific to this person's day, clothes carry the color, reasoning shown in plain words, one action.

Ban list (checked before every commit)

Pattern	Instead
Purple/blue gradients, gradient text	Solid tokens; color comes from the clothes
Inter / Roboto / Geist, monospace for "tech"	Instrument Serif + Instrument Sans
Pure #000 / #fff	Warm paper and ink
Cards everywhere, cards in cards, rounded-2xl	Content on paper, hairlines, radius by role
Uniform shadows, glassmorphism	Shadow only on sheets; blur at most once
Three equal icon cards, icon-in-circle	One anchor element, supporting items smaller
Bounce/elastic motion, `transition: all`	ease-out, 150–360ms, transform + opacity only
✨, "AI-powered", unlock / seamless / elevate	Show the reasoning; specific, dry copy
Big-number stat cards	One line of text with tabular numbers

08

Motion & voice

Token	Value	Use
ease-out	cubic-bezier(0.23, 1, 0.32, 1)	Entering / leaving (default)
ease-in-out	cubic-bezier(0.65, 0, 0.35, 1)	Moving on screen
fast / base / sheet	150 / 220 / 360 ms	Press · most transitions · sheets

Signature moments only: scan cutouts settle into the grid one by one; outfit pieces slide into the look (shoes last); a rejected piece strikes through and its replacement slides in. Everything honors reduced motion.

Voice

SAY

“Rain from 5pm — swapped to the leather boots.”
“You own 3 clean tees for 4 days.”
“Your closet is empty. Film it once — about a minute.”

DON’T SAY

“Optimized for weather conditions ✨ ”
“Unlock your perfect wardrobe with AI”
“Get started on your style journey!”

09

Screen checklist

1. **Squint:** one focal point, one primary action.
2. **Logo swap:** would it fit a fintech app? Then it’s too generic.
3. **Grayscale:** hierarchy survives without color.
4. **Ban list:** zero unexplained hits.
5. **States:** empty, loading, partial, error.
6. **Phone:** 375px, thumb reach, 44px targets, safe areas.
7. **Accessibility:** AA contrast, focus rings, no color-only status, reduced motion.
8. **Real content:** long names, 1 item vs 80 items.
9. **Screenshot** light and dark; compare with neighboring screens.
